Table 4: Distribution of dependent-adult care minutes by carer's sex and relationship to the probable recipient

| Carer's relationship to the recipient | Women | Men | Women, recipient 60+ | Men, recipient 60+ |
|---|---|---|---|---|
| Spouse | 21.4% | 7.4% | 25.0% | 5.4% |
| Parent | 17.5% | 3.3% | 0.0% | 0.0% |
| Son or daughter | 6.2% | 10.9% | 6.8% | 17.2% |
| Son- or daughter-in-law | 15.9% | 0.0% | 27.3% | 0.0% |
| Other relative or non-relative | 7.2% | 1.9% | 8.6% | 1.1% |
| Grandchild | 3.3% | 1.5% | 5.8% | 2.8% |
| Sibling | 1.7% | 0.7% | 0.0% | 0.0% |
| Parent-in-law | 0.6% | 0.0% | 0.0% | 0.0% |
| Grandparent | 0.4% | 0.0% | 0.0% | 0.0% |

*Notes:* Need households with exactly one probable recipient (2,028 households; 1,080 with a recipient aged 60+). Shares of all adult-care minutes in each sample, summing to 100% over the women and men columns. Relationship to the recipient is derived from both members' relationship to the head (for example, the head's wife caring for the head's parent is a daughter-in-law); 'son or daughter' includes a head caring for a parent, who may be a son-in-law. Carers 15+, excluding probable recipients. Survey-weighted.
