Grandmothers' care and mothers' time: coresident grandmothers in India

Journal of Population Economics

Preet Deep Singh, Independent Researcher, New Delhi, India

Corresponding author: preetds@iima.ac.in

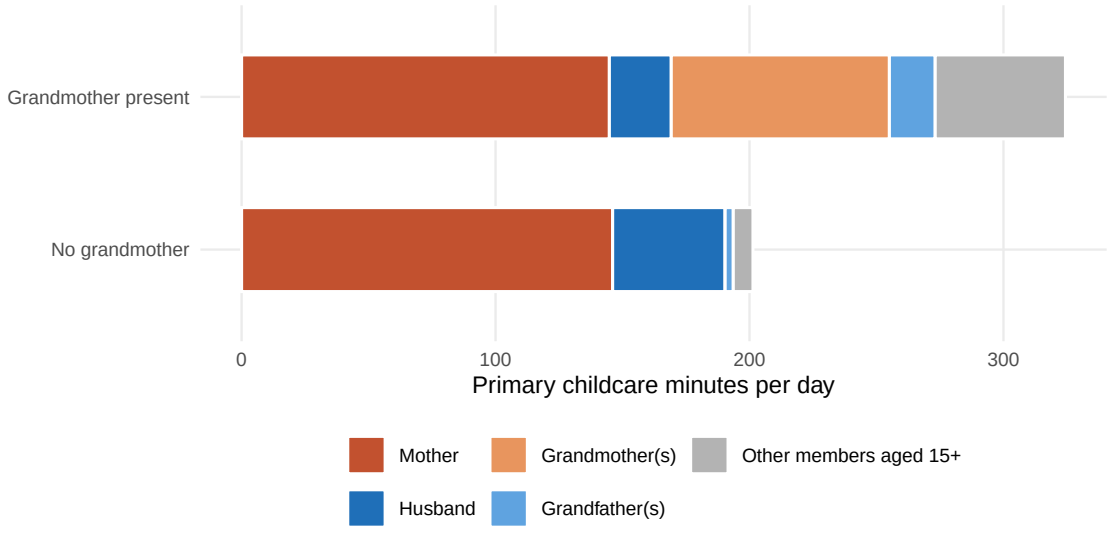

Figure S1: Primary childcare minutes per day by provider, with and without a coresident grandmother. Values and standard errors in Table 3.

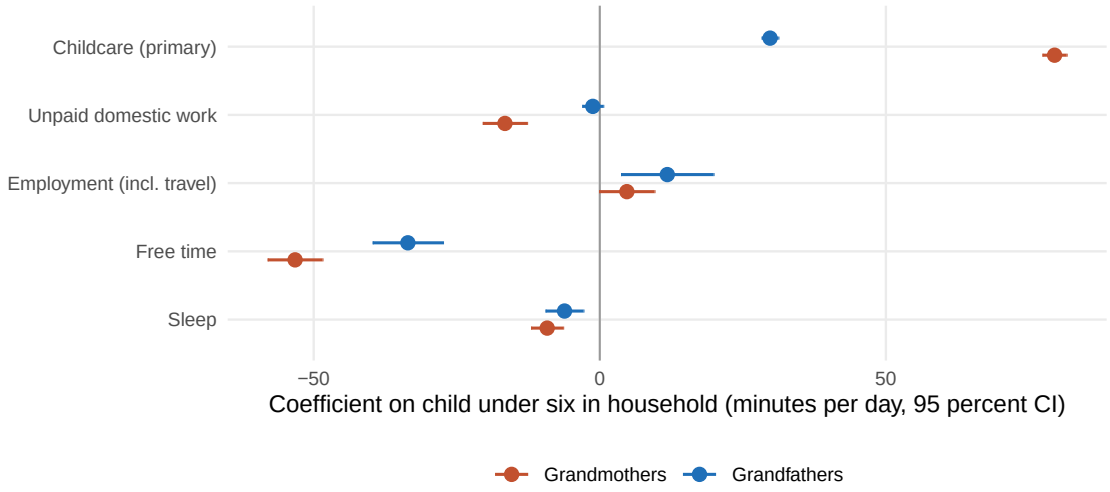

Figure S2: Older generation: minutes per day associated with a child under six in the household. Estimates in Table 4.

Table S1: Construction and validation of the person-day panel

Check	Value
Activity records	10,211,478
Person-days (diaries)	450,457
Households	139,487
First Stage Units	9,969
Diaries not summing to 1,440 minutes	5 of 450,457
Records flagged minor (secondary)	17.5%
Persons with varying weight	0.00%
Invalid activity codes	None
Married persons with linked spouse	88.5%
Under-6 count method	direct count (file contains members under 6)

Notes: All activity records are used; no row sampling. The number of children under six is a direct count of roster members under six.

Table S2: Sample construction

Step	N
Married women 18–49 at head or junior level, child under six in household	52,181
Excluded: head-level women living with a junior married woman aged 15–49	2,189
Analysis sample (mothers of children under six)	49,992
with a coresident grandmother	18,028
junior-level mothers without a grandmother	2,054
head-level mothers without a grandmother	29,910
junior-level mothers with a grandmother	15,196
head-level mothers with a grandmother	2,832
Placebo sample (youngest own child 6–14, no child under six)	19,829
Older generation: women aged 45–80	26,062
Older generation: men aged 45–80	19,382
Weighted shares, analysis sample	
with a coresident grandmother	36%
with a coresident grandfather	28%
with a grandfather but no grandmother	4.5%
at junior level	33%
daughters-in-law of the head, among junior-level mothers	95%
with a linked husband	83%
at junior level, among mothers with a grandmother	83%
youngest grandmother under 60, among mothers with a grandmother	60%
grandmother employed (usual status), among mothers with a grandmother	30%
grandmother(s)' share of mother's plus grandmother(s)' childcare	37%

Notes: Unweighted counts of person-day diaries, then survey-weighted shares. Head level: head or spouse of head. Junior level: married child of head or spouse of a married child.

Table S3: Older-generation women: sensitivity to the lower age limit

Outcome	Women 45–80 (main)	Women 40–80
Childcare (primary)	79.48 [77.37, 81.60]	79.14 [77.06, 81.22]
Active childcare	70.43 [68.40, 72.45]	70.08 [68.09, 72.08]
Passive childcare (minding)	7.65 [6.82, 8.47]	7.66 [6.84, 8.47]
Unpaid domestic work	-16.58 [-20.45, -12.70]	-16.19 [-19.99, -12.38]
Employment (incl. travel)	4.73 [-0.11, 9.57]	3.88 [-0.94, 8.70]
Employed (usual status, share)	0.016 [0.004, 0.028]	0.015 [0.003, 0.027]
Free time	-53.25 [-58.04, -48.46]	-52.58 [-57.28, -47.88]
Sleep	-9.19 [-11.99, -6.39]	-9.05 [-11.79, -6.31]

Notes: Estimate [95 percent confidence interval] for a child under six in the household, specification as in the older-generation table. Main sample: 26,062 women aged 45–80; alternative: 26,986 women aged 40–80, the same lower limit as the grandmother link for junior-level mothers. Conversely, 544 mothers in the analysis sample have a coresident grandmother only through a woman aged 40–44; the robustness table reports the mothers' estimate without them.
