Table 4: Distribution of dependent-adult care minutes by carer's sex and relationship to the probable recipient

Carer's relationship to the recipient	Women	Men	Women, recipient 60+	Men, recipient 60+
Spouse	21.4%	7.4%	25.0%	5.4%
Parent	17.5%	3.3%	0.0%	0.0%
Son or daughter	6.2%	10.9%	6.8%	17.2%
Son- or daughter-in-law	15.9%	0.0%	27.3%	0.0%
Other relative or non-relative	7.2%	1.9%	8.6%	1.1%
Grandchild	3.3%	1.5%	5.8%	2.8%
Sibling	1.7%	0.7%	0.0%	0.0%
Parent-in-law	0.6%	0.0%	0.0%	0.0%
Grandparent	0.4%	0.0%	0.0%	0.0%

Notes: Need households with exactly one probable recipient (2,028 households; 1,080 with a recipient aged 60+). Shares of all adult-care minutes in each sample, summing to 100% over the women and men columns. Relationship to the recipient is derived from both members' relationship to the head (for example, the head's wife caring for the head's parent is a daughter-in-law); 'son or daughter' includes a head caring for a parent, who may be a son-in-law. Carers 15+, excluding probable recipients. Survey-weighted.
